

Given current trends, retention of a 5 WPM Morse requirement for the General Class license does not seem very progressive.

Under this proposal the Technician Class license becomes the general entry portal to Amateur Radio and the number of classes would be reduced to three. I am in favor of reducing the number of classes and whether the entry-level class is called Novice, Technician, or Communicator is of no practical consequence.

The proposal to permit relaxation of digital bandwidth requirements at the upper end of 10 meters has considerable merit, although I do not think it is necessarily part of a restructuring proposal.
